HDL[®] | MARINE

HDL marine automation solutions are designed to effortlessly control a yacht's lighting, blinds, audio, security, air conditioning, and a host of other features via a smart device or wall-mounted HDL panel.

Scenes can also be created and activated with ease. This enables any yacht to be turned into a private theatre, tranquil restaurant, cosy bar, or even an elite nightclub with the simple press of a button.

PIONEERING MARINE AUTOMATION

Before you even step aboard your vessel, you can remotely activate any of the ships systems. From heating and cooling, to background music, HDL ensures that your environment matches your exact requirements.

If you are underway, or half a world away from your yacht, you can customise every aspect of your vessel by sending a sms 'start' command. This automatically activates your pre-set automation solutions, causing curtains to open, music to be played, and lighting activated.

HDL puts your yacht in your hands, via simple and convenient control.

01 LOUNGE

Function is the essence of beauty.

Turn your yacht into a multiplatform arena complete with meeting rooms, cinemas, restaurants, and night clubs by simply activating one of the customisable scene modes.

In scene mode the lights, music, curtains, AC, projectors, televisions and every other ship board appliance is automatically adjusted to ensure that the optimum atmosphere is created.

DINING ROOM

02

Your meal is about to be served, you take out your phone, and with a single touch activate the 'dinner' mode. Immediately soft tranquil music fills the cabin, and the curtains raise to reveal a stunning sunset just off your port bow.

The air conditioner engages at your desired dining temperature, and the soft pop of a cork can be heard from the galley. As the wine is poured, you sit back and relax.

When it's time to sleep you shouldn't have to worry about what devices are active, and with marine automation you don't have to. When you want to sleep simply touch the 'sleep' scene, the security solutions will be turned on, and all non-essential systems will be deactivated.

Like all scenes the sleep scene can be customised to your exact requirements.

In the morning you can slowly be awakened by your bedroom lighting gradually growing brighter, the curtains opening, and your favourite song being played.

A glance at your phone would instantly show what systems are active, leaving you ready to start a new day.

Safety for you and your loved ones is essential whether you are on land, or at sea. Real time video monitoring, and a range of PIR, window, smoke, air quality ultrasound, and Doppler sensors safeguard your vessel against all threats.

From anywhere in the world your security solutions can be monitored via your iOS or Android device, giving you complete peace of mind and security.
